What is claimed is:

1. A banner management method encoded on a computer-readable medium
   operating on a browser user interface on terminals in a network of
   terminals, the method comprising the steps of: (1) initialising a command
   file with inputs from a system administrator of the network, including
   providing an interface by which the system administrator can customize
   banners displayed on each browser interface; and (2) executing the
   command file, thus displaying banners as ordered by the command file
